

Chemical Peel Post-Care Instructions

To ensure maximum comfort and benefit after the treatment, it is important to follow the steps below at home:

- Aerobic exercise or vigorous physical activity should be avoided for the first 48 hours.
- Direct sunlight exposure is to be completely avoided immediately following the treatment (including any strong UV light exposure and tanning beds). If some sun exposure cannot be avoided, first apply sunscreen with an SPF of 30 or greater. Sunscreen (with at least a SPF of 15) should become a part of your daily skin care regimen as your skin will become more sensitive to the sun as a result of this treatment.
- Cleanse your face with water or a mild soap
- Gently moisturize your face
- **DO NOT** apply any type of glycolic acid or exfoliation products as this can severely damage or irritate the skin during the entire healing process.
- **DO NOT** peel, rub, or scratch your skin at any time, whatsoever. This WILL cause damage and compromise your results as well as possibly cause severe scarring.
- If you experience painful areas of the face, contact your Skin Care Specialist immediately, especially if you are prone to cold sores. Any blisters that form will need to be reported immediately.
- If you may have additional questions or concerns regarding your treatment or suggested home product/post-treatment care, you must consult the Skin Care Specialist immediately.

For a medical emergency please call 911. If you have any questions or concerns, please call our office at 970-242-8177
